#### **Abstract**

Metals and minerals are known to man since human civilization and became integral part of Ayurvedic therapeutics. *Tamra* (copper) and its alloys (*Pittala* and *Kamsya*) are one among such metals. They are emphasized throughout classical literature for various therapeutic and non therapeutic purposes. A number of formulations are found in *Brihatrayi* in contexts like internal administration, external application, utilization in the preparation of instruments and other purposes. Formulations of *Tamra* are recommended in diseases like *Hicca* (hiccup), *Swasa* (respiratory distress), *Pipasa* (Thirst), *Visha* (Poison) and *Pandu* (Anemia) etc. In the current review, an attempt has been made to compile all such references of copper and its alloys referred in *Brihatrayi*.

Key words: Brihatrayi, Caraka, Copper, Kamsya, Pittala, Tamra

#### **Introduction:**

Ayurvedic system of medicine is the most ancient medical science of the world. It is a stream of knowledge coming down since generations to generations and well-documented through series of books. Metals and minerals are an inseparable part of therapeutics in this system. Initially their use was limited for non-therapeutic preparation purposes such as instruments, manufacturing of containers and other livelihood instruments etc. Their therapeutic use was increased during the period of Rasashastra and became integral part of Ayurvedic therapeutics due to their additional advantages like lesser doses, quick action etc.(1) Tamra (copper) is one such metals mentioned with wide range of therapeutics. Though wide therapeutic utility of Tamra was increased with advent of Rasashastra, references pertaining to Tamra can be traced back to ancient literature. Ample of *Tamra* utilization references are found in Brihatrayi for administration. internal applications, preparation of equipments and other purposes etc. Unfortunately, this information is scattered in the classics. Considering this, reference of Tamra and its alloys available in Brihatrayi are compiled and grouped into categories with intension to provide focus therapeutic and non-therapeutic usage of them. The categories are as under:

- Utilization in therapeutics
   Internal administration
   External application
- ➤ Utilization in the preparation of instruments/equipments

# > Other purposes etc.

#### **Materials:**

Brihatrayi (Caraka Samhita, Sushruta Samhita and Astanga Hridaya) with their commentaries are screened to compile references of copper and its alloys.

# Results and observations: Classification:

Caraka placed Tamra under mineral group (Parthiva) as one of six metals.(2) In Sushruta Samhita, Tamra is described in a group with other metals under the main heading as 'Trapvadi Gana'. Pharmacological properties and actions are clearly mentioned. Vagbhata mentioned Tamra as one of Lekhana Putapaka Dravya.(3) Astanga Hridaya include Kamsya under Tikta Skandha.(4)

# **Synonyms:**

Caraka uses the term Arka in few places which clarifies by Chakrapani as synonymous with Tamra.(5) Sushruta uses the term Audumbara for Tamra.

# Pharmacological action:

Sushruta discussed pharmacological actions of Tamra like astringent (Kashaya) and sweet taste (Madhura), cold in potency (Sheeta Virya), scarificant (Lekhana) and laxative property (Sara).(6) Kamsya is slightly bitter, scarificant, good for vision and mitigates Kapha and Vata.(7)

# **Specific Precaution:**

Direct reference providing safety aspects during therapeutic use of copper and its alloys is not available but seer Chakrapani emphasized to provide safety aspects of utilizing metals and minerals that have been properly incinerated in appropriate doses. Otherwise they manifest number of adverse reactions (Dushparinamam).(8)

#### Tamra in Caraka Samhita

Formulations of Tamra are advocated for internal administration in conditions like *Hicca* (hiccup), *Swasa* (respiratory distress) etc.(9) He advocated Tamra Curna to eliminate unabsorbed poison from Koshta (abdominal cavity).(10) Caraka used Tamra as one of the main ingredient in many Rasayana formulations like Brahma Rasayana-II(11), Apara Indrokta Rasavana(12) etc. Tamra is also an important ingredient of formulations for topical applications. Formulations like Anjana, Varti and Curna etc. with copper as an ingredient are mentioned in classic. Caraka emphasized its use in Lepa and Curna forms in the treatment of Kushta (Skin disorders), Granthi (Abscess).(13, 14) Varti prepared with the powder of copper in combination of other drugs is advocated in eye diseases.(15) Copper container is preferred in preparation of *Dristiprada Varti.*(16) also used in preparing Tamra is equipments like Jivha Nirlekhana Yantra (tongue scrappers), Vasti Netra (Nozzle of enema pot) and *Patra* (containers) etc.(17, 18, 19) Along with therapeutic attributes, he quoted *Tamra* as poison in reference to simile for disrespect of quack.(20) The references mentioned in Caraka Samhita that hold *Tamra* as one of active metallic constituent are listed in Table 1.

Table-1 Therapeutic utilization of *Tamra* in *Caraka Samhita*

#### Tamra in Sushruta Samhita

Trapvadi Gana is specially attributed to cure number of conditions like Pipasa (Thirst), Visha (Poison), Pandu (Anemia) etc.(21) Tamra is mentioned to be one of the Lekhana Putapaka Dravya (drug used for scrapping).(22) Seer emphasized anti diabetic activity of Tamra in combination with other metals and decoction of Salasaradi Gana.(23) Sushruta used Tamra in many forms like Anjana, Varti, Gutika and Rasakriya to treat eye disorders. If the base of Arbuda (tumor) is small, it can be kept encircled with Tamra Patti (thin sheet of copper).(24) Wounds of Upadamsha (gonorrhea) are treated with sprinkling of Tamra Curna along with other herbal powders.(25) Different Shalakas (probes) for application of collyrium in different eye disorders were prepared from Tamra.(26) Vessels made of copper are advocated in different pharmaceutical procedures for preparation and storage of medicines. He clearly said that water stored in vessels made up of copper, bronze, gold and precious stones should be used for drinking. It is said to be best in treating Paittika disorders.(27) The references mentioned in Sushruta Samhita that hold Tamra as one of active metallic constituent are listed at Table 2.

# Tamra in Astanga Hridaya

Tamra in the form of Anjana, Varti, Gutika etc. are used to treat many eye disorders. Mahanila Gutika is used to treat corneal opacity (Shukra).(28) Copper vessels and containers are prescribed for preparation and storage of medicines.(29) He also advocated use of copper to remove unabsorbed poison from Koshta.(30) Tamra is used along with other ingredients in Dhupa Yoga (fumigation) to relieve friction and severe pain.(31) The references mentioned in Astanga Hridaya that hold Tamra as one of active metallic component are listed at Table 3

# Pittala (Brass)

Pittala, an important Mishra Loha (alloy) is familiar as brass. It is made up of copper and zinc in 2:1 proportion.(32) It is known since Samhita Kala, utilized in the preparation of different instruments for various procedures. Caraka used this metal to prepare Jivha Nirlekhana Yantra and Vasti Netra.(33) No reference pertaining to Pittala was found in Astanga Hridaya. Very few references in Brihatrayi that hold Pittala as one of active metallic component are compiled at Table 4.

Table 4: Depicting references of *Pittala* for different purposes

Sr.No	Reference	Description	Probable translation
1	Caraka Sutra 5/74	Jivha Nirlekhana Dravya	Tongue scrapper
2	Caraka Siddhi 3/7	Vasti Netra Karnika Dravya	Nozzle of enema pot
3	Sushruta Sutra 26/20	Shalya	Foreign body
4	Sushruta Chikitsa 35/11	Vasti Netra	Nozzle of enema pot

# Kamsya (Bronze)

Kamsya, another important Mishra Loha, made up of copper and tin (8:2) known since the period of Samhita Kala.(34) It is known as bell metal or bronze. In Brihatrayi, Kamsya was used to prepare Vasti Netra, Kamsya utensils were used in different pharmaceutical procedures and for storage of medicines. Sushruta used this metal as Taapa Sweda Dravya (35) and Murdha virechana Dravya.(36) Few references in Brihatrayi that hold the Kamsya as one of active metallic component are compiled at Table 5.

Table 5: Depicting references of *Kamsya* for different purposes

Astanga Hridaya Sutra 10/29 Tikta Skandha Dravya Categorized under Tikta skanda
 Astanga Hridaya Uttara Kamsya Patra Bronze container 16/38

#### **Discussion:**

Screening of classics of Brihatrayi gives clear idea that Tamra and its alloys were used to treat many pathological manifestations. Though, the use of metals and minerals in therapeutics was increased after the development of Rasashastra but roots of this science can be traced back to Brihatrayi. Caraka considers Tamra under Parthiva category. Formulations of Tamra are recommended in diseases like Hicca (hiccup), Swasa (respiratory distress), Pipasa (Thirst), Visha (Poison) and Pandu (Anemia) etc. Caraka used fine powder of copper to remove poison from Koshta. Chakrapani clarifies that non incinerated copper should be used for that purpose because of its emesis activity. Fine powders of these metals were prescribed for internal administration and external applications. Fine powders were used externally in Kushta, Vriddhi and Granthi. Tamra is said to have Pittahara, Kaphahara property.

Modern science also proves antimicrobial(37) and fungicidal(38) activity of copper and its alloys surfaces. They also conclude that copper has potential application as an inhibitory agent in the various stages of the food processing operations. This may be the reason for seers advocating use of vessels and containers made of these metals in preparation and storage of medicines. It makes clear that such metals has special role in different clinical conditions. They have made their unique place in Ayurvedic pharmacopoeia and became integral part of Ayurvedic therapeutics.

#### **Conclusion:**

Reviewing of *Brihatrayi* classics reveals that Ayurveda utilized copper and its alloys extensively for therapeutic and

non-therapeutic purposes. Fine powders of these metals were used for both internal administration and external application. Seers advocated using of copper vessels and containers in different pharmaceutical procedures. Though pharmaceutical aspect of these metals is not well explained in Brihatravi, indirect references for their purification, incineration infers that one should be cautious while using such metals. This work is anticipated to be handy for referring the utilization of copper emphasized in ancient Indian literature and reduces the sternous efforts of researchers to gather information. This also emphasizes the frequency of metal used in different conditions.
